Field report on
D3a Monitoring status of the salmonid populations; electrofishing

Electrofishing in Pirkanmaa area 05.-07.06.2023

Jouni Salonen, Jonna Kuha, Katariina Rautiainen

All fish were released after analyses. For temperature measurements an analogic thermometer was used, and Pesola spring balances were used to measure the weight – alive fish were put to a balanced plastic bag (so that also some water was included in the weight). GeOmega device was used for electrofishing.
